Appl. Scrial No. 10/768,097

RECEIVED CENTRAL FAX CENTER MAY 0 6 2008

Listing of Claims:

- (Original) In a method for addressing and sustaining a PDP wherein an addressing
 voltage is applied to at least one section S1 of the PDP while at least one other section S2
 of the PDP is being simultaneously sustained, the improvement wherein visual artifacts
 between the sections are reduced by means of gamma corrected subfields with sustains
 timed to balance the center of light between S1 and S2.
- 2. (Original) In a method for operating a surface discharge AC plasma display having row scan, bulk sustain, and column data electrodes, the improvement which comprises addressing at least one section S₁ of the AC plasma display while another section S₂ is being simultaneously sustained, each section having a predetermined number of bulk sustain electrodes and row scan electrodes, and wherein visual artifacts between the sections are reduced by means of gamma corrected subfields with sustains timed to balance the center of light between S1 and S2.
- 3. (Original) The invention of Claim 2 wherein section S₂ is subsequently addressed while section S₁ is being sustained.
- 4. (Original) The invention of Claim 3 wherein there are 6 to 17 subfields.
- 5. (Original) The invention of Claim 4 wherein each of the sections S₁ and S₂ is sustained with a different number of sustains per subfield.
- 6. (Original) The invention of Claim 4 wherein at least one subfield of each section S1 and S2 is sustained with the same number of sustains per subfield.
- 7. (Original) The invention of Claim 2 wherein the resolution of the plasma display is about 480 to about 1200 row scan electrodes.
- 8. (Original) The invention of Claim 2 wherein there are 6 to 17 subfields for a resolution up to 768 row scan electrodes.

4197240255

- 9. (Original) The invention of Claim 2 wherein the method for the reduction of motion and visual artifacts includes the writing of pixels followed by selective crase.
- 10. (Original) The invention of Claim 1 wherein there is provided a reset voltage before addressing.
- 11. (Original) The invention of Claim 10 wherein the reset before addressing is a slow ramp reset voltage.
- 12. (Original) An AC plasma display having row scan, bulk sustain, and column data electrodes, said display being divided into a plurality of sections S1, S2, Sn, each section having a predetermined number of bulk sustain electrodes and row scan electrodes, and electronic circuitry for simultaneously addressing and sustaining at least two different sections of the AC plasma display, the improvement wherein visual artifacts between a section being addressed and a section being simultaneously sustained are reduced by means of gamma corrected subfields with sustains timed to balance the center of light between the sections.
- 13. (Original) The invention of Claim 12 wherein there is provided a reset voltage before addressing.
- 14. (Original) The invention of Claim 13 wherein the reset before addressing is a slow ramp reset voltage.
- 15. (Original) In a system for addressing and sustaining PDP, wherein an addressing voltage is applied to at least one section S1 of the display panel while at least one other section S2 of the panel is being simultaneously sustained, the improvement wherein visual artifacts are reduced by means of gamma corrected subfields with sustains timed to balance the center of light between S1 and S2.

- 16. (Original) In a system having electronic circuitry for operation of an AC plasma display having row scan, bulk sustain, and column data electrodes, said display being divided into a plurality of sections S₁, S₂, S_n, each section having a predetermined number of bulk sustain electrodes and row scan electrodes the improvement which comprises electronic circuitry for simultaneously addressing and sustaining at least two different sections of the AC plasma display and wherein visual artifacts between a section being addressed and a section being simultaneously sustained are reduced by means of gamma corrected subfields with sustains timed to balance the center of light between the sections.
- 17. (Original) The invention of Claim 16 wherein there is provided a reset voltage before addressing.
- 18. (Original) The invention of Claim 17 wherein the reset before addressing is a slow ramp reset voltage.
